

Jenton Banding
Excellence in packaging automation

A sustainable packaging choice

Jenton's wide selection of banding machines include own brand 'Jenton BANDIT®' heat seal machines with table top or free standing configuration, and also offer heat and ultrasonic banding machines from ATS Tanner in Switzerland who we have worked with since the 1990s.

Banding benefits include:

- Creation of multipacks
- Tamper evidence
- Easier box / pack loading
- Labelling / promotional opportunities
- Shelf ready packaging

Heat Seal Banding Machines

Typically found in print finishing departments, currency centres, contract packers and other sites where it is necessary to bundle smaller stacks or multipacks.

Ultrasonic Banding Machines

Novel ultrasonic welding on stand-alone and integrated banding machines allows use of uncoated films and robust papers which are strong and cost effective.

Automatic Banding Machines

Automatic Banding Machines maximise speed on packing lines and always present pack squarely. Automatic systems can do two things at once and so beat operator-fed machines on speed!

Reduce your plastic packaging

To discuss your banding needs or to see our products in action at our showroom in Whitchurch get in touch
