

# Same Container

# Different Outcome

**When cargo crosses the ocean, it encounters various risks, including condensation and humidity.**

**These conditions pose threats of mold growth and corrosion.**

**A single humid journey can jeopardize your inventory, lead to customer returns, or even worse — undermine the trust in your brand.**

**In fact, about 10% of  
containerized cargo is  
discarded due to moisture  
damage.**

**Here's the good news:**

**Moisture prevention is  
simpler and more  
affordable than you might  
think!**

**Desiccants, such as Super Dry's Calcium chloride formula, alter the outcome by absorbing excess moisture throughout your entire journey.**

**As the most effective  
desiccant on the market,  
we help our clients  
experience fewer claims,  
happier customers, and  
greater savings on every  
shipment.**

**Get in touch with our  
team to book a free  
consultation today!**

**Together we'll assess  
your specific moisture  
control needs.**
